~~~ 1st August 1997 ~~~

Welcome to the 14th issue of Enigma, and another bumper issue which contains much information that I hope you will find interesting.

So far, 1997 has been a hectic year. The crop circle season got off to a slow, yet controversial start with many arguments and disinformation floating around. However, the season soon matured into one yielding interesting research, which will be published in issue 15.

One thing about crop circle research is that it seems to spawn high feelings and emotions in people. In a way this is good because it means people are opening their hearts, clearing some of their pre-conceived 'conditioning' and having new experiences, which always accompany change.

However, unfortunately ego often gets in the way. Some people seem to think they have a monopoly on crop circle research. As my good friend, and organiser of the hugely successful Cardiff Paranormal conferences, Kerry Blower says, "There are no experts". This is indeed true. No one has solved the mystery of the crop circles and no one's opinions are any better than anyone else's.

Each person should follow their own heart and trail of enlightenment. There is no wrong path because every path is lined with experience and adventure. As anyone who has read "The Celestine Prophecy" will know, we create our own reality and that everything that occurs in

our lives can teach us valuable lessons.

The crop circles don't need guardians to wrap them in silk covers and protect them from the curses and disinformation spread by hoaxers and sceptics. We don't need a new religion to teach us what is already inside each and every one of us.

I have no problem speaking with hoaxers, or even discussing the possibility of hoaxing. Sure, some circles are hoaxed, but I still firmly believe in a genuine phenomena.

The people who perpetrate the notion that *every* crop circle is undeniably non-human in origin are building sand castles as the sea comes in, for they have most to lose, like the early church leaders when their faith was questioned. By allowing a share of scepticism we can actually build a stronger case for crop circles, and I am probably one of the firmest believers in non-human origins for many, but not all, crop circles.

I believe that if a genuine phenomena exists then it should stand up on its own merits. It doesn't need guardians of the faith to protect it from ridicule and erosion.

# The Tree of Life

Paul Vigay

follows the evolution of crop circle research

One of the first formations to appear during the 1997 crop circle season appeared near to the ancient Barbury Castle hillfort, just north of Marlborough in Wiltshire.

Resembling the Tree of Life symbol, some people have seen it as a significant formation demonstrating intelligence in its creation. When I first saw an aerial shot of the formation I was sceptical as to its origins because of the perfect alignment of its circles with the tramlines in the field (see fig.1 overleaf).

### Accurate Analysis

I decided to do some accurate analysis using my newly developed Thoth™ computer software, which was capable of accurately scaling an aerial photograph and simultaneously overlaying a geometrically perfect Tree of Life, found using sacred geometry.

At this point, I should perhaps divert to give some background to the Tree of Life, in itself a vast and often misunderstood subject - and one which I

believe has special significance to current crop circle research.

### Biblical Origins

The origins of the Tree of Life are probably lost forever in the mists of time, but I think I am sufficiently accurate to say that it dates from around the time of the Old Testament in The Bible. Some sources refer to it as being taught to Adam, in Eden by the Archangel Gabriel and then passed on 'from mouth to ear', whereas other texts quote Moses as being the chosen one, and his history is told in the book of Exodus in The Bible.

Either way, its origins seem to stem from Jewish tradition and form the basis of a mystery school called the Qabalah (or Cabala in Christian tradition).

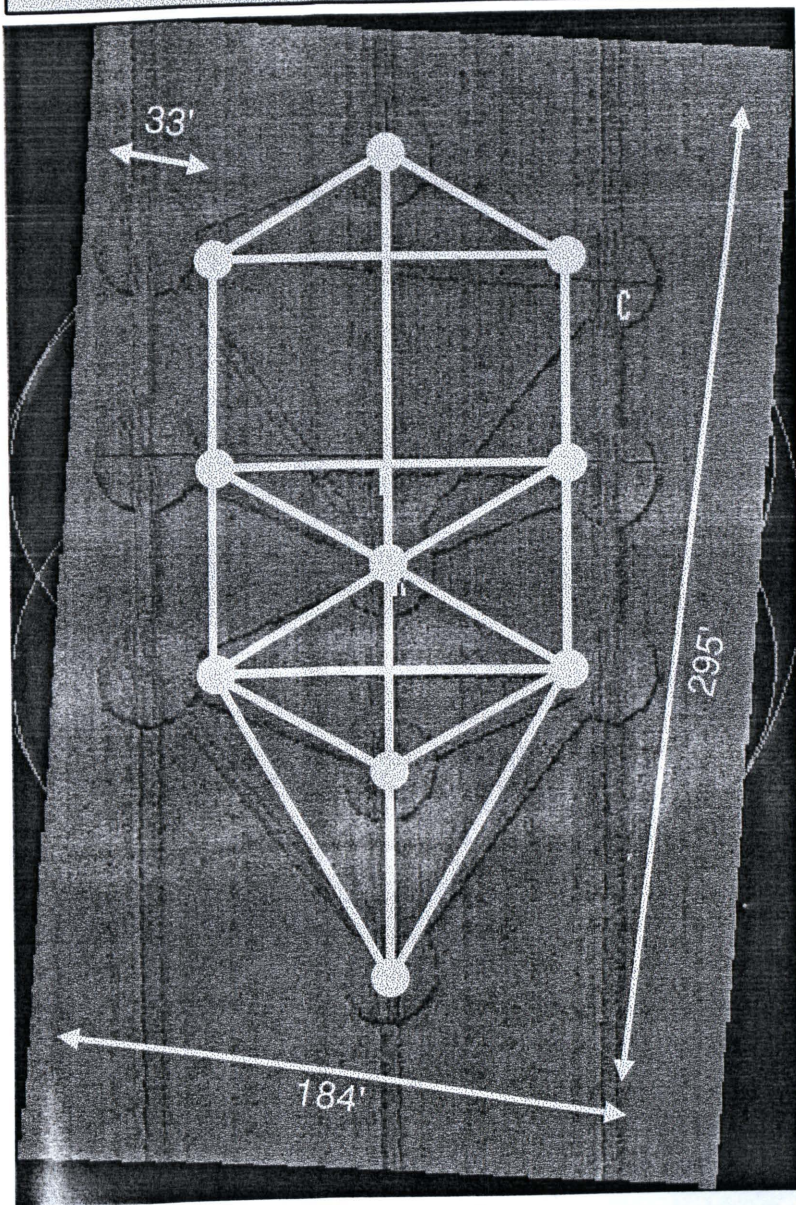

### Incorrect Geometry

Although the geometry of the crop formation is not correct, leading me to be suspicious of the formation, I decided to investigate the origins of the Qabalah to see if there are any lessons to be learnt in order to find a positive outcome from

# The "Tree of Life" formation

Barbury Castle, Wiltshire, May 1997  
Analysed using IThoth™ computer software  
©Paul Vigay, May 1997

**Fig.1** Photo of the crop formation with the Tree of Life superimposed over the top. The Tree of Life can be derived from the Flower of Life, and uses very special sacred geometry. As you can see from this diagram, the formation in the field has proportions which are too wide if you fit it to the correct geometry. The outer six circles have obviously been moved out to align with the tramlines, thus the geometry of the actual crop formation is incorrect when given the correct sacred geometry.

a potentially negative 'hoaxed' formation.

## Significance after all...

This is where the trail started getting interesting and what made me decide that this is indeed a significant formation, whatever it's origin. I think a lot of researchers who have been investigating the circles for many years have almost got tired of the "is it a hoax or is it genuine" argument - one which incidentally, can never be decided one way or another (see 'Blunting Occam's razor', also in this issue).

## There is More!

A lot of people, myself included, believe that circles research has now elevated beyond the physical 'flattened corn' to something on a higher, more spiritual, plane. For us, the circles have served their purpose and we strive for higher knowledge still - coming through meditation and perseverance with ongoing research into other dimensions.

I think this formation serves as a reminder to all circles researchers to look within and to the invisible universe, rather than the physical 'corn in the field' universe.

The Qabalah is a complex, yet simple philosophy. It is positive-negative, man-woman, a balance between inner feelings and outer experiences and the realisation that seemingly complex problems often have simple solutions.

It is a tree spreading it's branches throughout all of creation, yet reconciles

all diversity in unity. Although it has many branches, it is all a connected whole. Some would argue that it is a classification of everything - nothing exists which cannot be placed in one or other of it's ten Sephiroth, or spheres.

## A Higher Meaning

The Tree of Life is essentially a summary of the Qabalah and can be referred to as a 'map of the Universe'. Each sphere and path has a specific meaning and the whole tree is subdivided into regions. These connect to the 'Holy name of God', the Tetragrammaton.

Although it would probably take an entire book to describe the Tree of Life in full (I hope to include further thoughts in future issues) it basically consists of four worlds;

**Atziluth**, represented by fire and creative energy.

**Briah**, represented by water and receptive energy.

**Yetzirah**, represented by air and formative energy.

**Assiah**, represented by earth and material energy.

Each of the twenty two connecting paths in the Tree of Life also holds special meaning and holds a unique relationship with the rest of the tree.

You will find that throughout history, people have associated many philosophies and teachings with that of the Qabalah. Tarot cards can be used to go on a spiritual journey as far or as

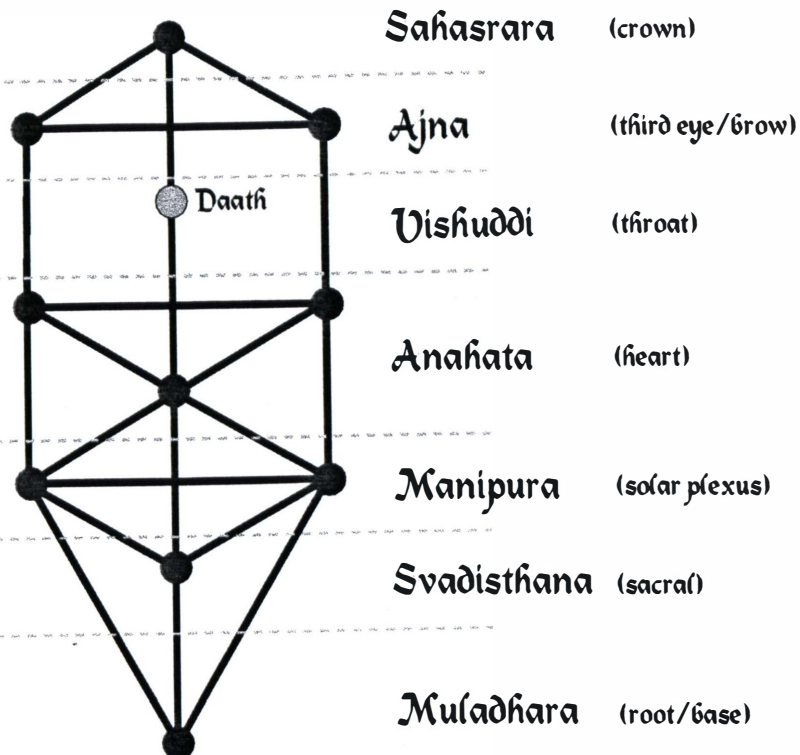

Fig.2 The Tree of Life showing the seven chakras.

deep as needed and much significance and meaning is derived from the Tree of Life.

### Life Energy

The Tree of Life also plays a significant part in Numerology, or the study of the significance of numbers. It helps explain the Chakra system within the human body. The word 'chakra' is Sanskrit for 'wheel' - and can be described as a wheel of energy within the body. Chakra's are often described as a lotus, or ball, and

each rotate in all directions and vibrate to a specific frequency.

### Forces Within

The Tree of Life can be divided into eight layers which, if the two central ones are joined, corresponds to the seven chakra's within the human body (fig.2). The chakra system forms a powerful energy grid within the human body and can be used for healing as well as meditation.

Western tradition is based upon theory, proven by tests and then accumulated into statistical data, whereas Eastern tradition teaches that nothing is accepted unless it is experienced as a personal truth. This is very true of crop circles where personal experience is very much an essence of our individual paths.

People practising Laya yoga will also be aware of the powerful *Kundalini* force spiralling its way through the chakras. This energy is described as a coiled up snake lying dormant in the base chakra.

### Awakening Spirals

The purpose of Laya yoga is to awaken the Kundalini and raise it up through the other six chakras. The technique of this will be taught in future articles, but essentially this energy can be made to spiral, almost DNA like, up through the chakra system while the Yin and Yan channels change position and the Kundalini resumes its slumber position in the base chakra.

The action of this energy is also known as the *Caduceus* and is shown as a double-helix snake twisting itself around the Tree of Life.

I mentioned earlier that the Tree of Life encompasses a good, or positive world. It also has an evil or negative side to it. All humans possess these positives and negatives. It is important to recognise the dark side within. Only then can one choose to live in the light where ignorance is no excuse. Only by experiencing evil can we marvel at the wonder of what is good.

### The Gateway to Beyond

The Tree of Life is actually three dimensional, and the non-numbered sphere, called *Daath*, is the gateway to the dark side of the Tree.

By being aware of the power within we have the power to change our external environment. How often have you heard the phrase "you create your own reality". This is explained in more depth in my article, "From Science to Spirituality" (also in this issue), but essentially means that the mind is a very powerful instrument.

From a more scientific perspective, the various regions of the Tree of Life also correspond to different brainwave patterns; Beta, Alpha, Theta and Delta. This is a topic of ongoing research, so will be covered in future issues.

### Learning our Lessons

By studying the various teachings of the Tree of Life, it has helped me have a better understanding of crop circle research. To this end, I see the Tree of Life crop circle not just as 'flattened corn' which may or may not be man-made, but as a whole concept of where we are in the subject.

The Qabalah can help people express true feelings and thoughts to enhance relationships with others. This lesson teaches us to be honest with one another and to respect that each of us have our own views and theories as to the crop circle mystery. Each opinion is as good and valid as any other and we should respect this.

The Qabalah also assists with the realisation that bizarre behaviour in others is not necessarily bad. This lesson teaches us that hoaxers and meddlers also have an important role to play in the subject. Let not us judge others, should they judge us.

The Qabalah demonstrates the discovery that a balance between feminine and masculine creates harmony and peace. This lesson teaches us to keep things in perspective and to allow both sides of our consciousness to function equally.

The Qabalah can show the realisation that apparently complex problems often have simple solutions. This lesson teaches us to look at things in new and different ways. Often the solution is staring us in the face, but we are too busy searching for an answer to actually spot the answer.

The Qabalah teaches the knowledge that each individual has a unique purpose to fulfil in the universe during this lifetime. This lesson teaches us that every single person holds a unique piece of the cosmic jigsaw and even if a single piece is missing, the picture is not complete. Each individual person is no more and no less important than the next person.

### The Path of Life

There are many other teachings in the Qabalah and I think the more you meditate on the subject, the further along the path you will travel. What we must remember is that it is not a race. We will all get to the end destination, even though we may travel many different

paths. Each person has their own journey to follow, and their own Tree of Life to experience.

I think this formation is significant, not because of its quality, or even authenticity, but because of the many messages and lessons it can teach us. It has highlighted the Tree of Life, which many people may not have experienced before.

### Who's Right? Who's Wrong?

It has made many people look inwards for answers. There are many different politics and viewpoints expressed in the crop circle fraternity. People fall out with others and let ego's get in the way of research. Many people hold onto the belief that *every* crop circle is genuine and decry anyone who claims otherwise.

I think this formation should serve as a balance between scientific and spiritual, ego and ordinary, love and fear. It's also interesting to note that it has arrived in 1997. Seven years after a lot of people had their first awakening or awareness of the changes on the planet.

### 1990 Re-Visited

Seven is a significant number and if that first 'calling' was the higher consciousness entering our base chakra, we are now at our seventh, or crown, chakra. People experienced significant changes in their lives around 1990. I think the next stage of awareness is occurring in 1997 as the energy shifts from our body, through our crown chakra, out to the universe above. Some people are experiencing smaller, yet still

significant, changes and energies now in 1997 and I believe these energies will get stronger still until we all reach the ultimate goal.

### Laugh a minute with the USAF!

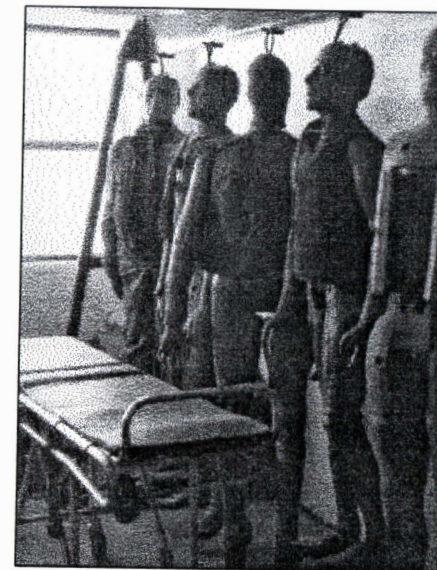

Not content to try to dismiss the Roswell UFO crash of 1947 as a Project Mogul weather balloon, the US air force has recently released its funniest press release yet.

Since an official report stated that the 1947 crash in the New Mexico desert was no more than a downed weather monitoring balloon, no one really believed what the military put out. The sheer weight of evidence and eye-witness reports begs a better explanation.

However a new report, released just before the 50th anniversary of the event, makes even more laughable reading. Attempting to account for the numerous eye-witness accounts of alien bodies being recovered from the crash site, the report tries to claim that the USAF was involved in some kind of testing operation in the 1950's, involving

"anthropomorphic dummies". The official military photograph of these dummies is reproduced below, but to me looks as much alien-like as a shop manikin.

In fact, the whole story is the most absurd claim yet and, I believe, helps to fuel the evidence of a major cover-up.

## Ockham's not-so-close shave or.... How to blunten his Razor!

One argument often touted by sceptical thinkers and debunkers when faced with the implications of crop circle and UFO research - indeed any account of paranormal phenomenon - is that of Occam's Razor.

I thought I'd write this article to try to illustrate the thinking behind this line of attack, the origin of the phrase itself and the various flaws in it's logic.

William of Ockham (as his name was correctly spelt) was born in 1270 and belonged to the Order of Franciscans, an order of friars founded in 1209 by St. Francis of Assisi, who believed in the personal and corporate poverty of it's members. This order has survived as a missionary and charitable branch of the Roman Catholic Church to this day.

He was mainly responsible for the philosophical doctrine of nominalism (those who regard "universals" or abstract concepts as mere names without any corresponding realities) and claimed, in effect, that science is about things whereas logic, philosophy and religion are about terms or concepts (the platonic tradition).

However, his most famous legacy has been "Ockham's Razor" which states "Entia non sunt multiplicanda praeter necessitatem", or "Entities are not to be multiplied beyond necessity". His actual

words were more likely "It is vain to do with more what can be done with fewer" although it amounts to the same effect; If everything in some science can be interpreted without assuming this or that hypothetical entity, there is no ground for assuming it.

Sceptics like resorting to this line of logic because it avoids having to handle any unexplained concepts. To use a common example, namely crop circles....

To apply Ockham's Razor would be to discount the seemingly far-fetched concept that they are made by aliens or some higher intelligence and, instead, opt for the simpler solution that they are all man-made, or hoaxed.

This would seem a sensible, and logical, deduction since if I lose my car keys I automatically apply Ockham's principle and assume I've put them down somewhere I can't remember, rather than some race of aliens have teleported them away.

However, there are a couple of fundamental flaws one can find in it's application to different specific cases. Firstly, the Razor takes no account of time or epoch when making its cuts. For example, what may sound needlessly complicated today may be simplicity itself tomorrow.

To use an analogy, consider the following example; In the middle ages, had someone demonstrated a modern-

day television set one onlooker may have described the experience as spiritual, or the face of God looking out from a mystical casket. Had another onlooker described the event as a video and sound recording converted into a form of electromagnetic radiation and transmitted along a piece of bent metal and then hundreds of miles through the air and then decoded and re-formed as a sequence of electrons fired at high speed towards a phosphorus shield known as a cathode ray tube, then I'm sure they would have been dismissed as needlessly complicating matters - and probably also scolded for daring to dismiss the 'vision of God', maybe even punished for heresy.

Just because the more complicated explanation was hard to understand, not even discovered or, dare I say it, unexplained at the time doesn't mean that it should be discounted. This is what science and discovery are about. Exploring all possibilities.

Hoaxing may be the simplest explanation to come to terms with regarding crop circle origins, but should we not leave some room for exploring new research and investigations?

If, for argument's sake, aliens landed their mothership on the White House lawn or Parliament Square and proceeded to create a perfect pictogram in the grass, with hundreds of witnesses, then the hoaxing hypothesis would immediately become the more complicated one - considering that no hoaxers have managed to recreate the

complex floor lays, bent nodes, perfect geometry and other aspects of the crop circle mystery - all in the dark of night, making no mistakes and not a single person ever being caught.

To apply Ockham's razor is almost arrogant, assuming that the person wielding the razor is capable of being the judge and jury as to what is the simplest explanation.

Ockham's Razor is at best a subjective comment based on an individual's interpretation of what may or may not be a simple explanation. Who is to say who decides which explanation is the simplest?

I may decide that one particular hypothesis makes more sense than another, which someone else may agree or disagree with.

I may find algebra easy to comprehend whereas another person may find it impossibly hard. Just because someone may find something difficult to comprehend shouldn't mean it should be discounted for others who don't find it a problem.

Sceptics often think that they have a monopoly on scientific thinking and that they are somehow guardians of established thought and teaching. It is my view that Ockham's Razor itself should be cut away, allowing people to carry on open-minded research, exploring all avenues and possibilities without fear of ridicule or stepping outside the established 'world view'.

Over the past seven years of my research I have investigated many aspects of the evolving crop circle mystery and made many interesting discoveries regarding mankind's elevating levels of consciousness.

### The Message of Crop Circles

It's funny how researching crop circles can lead onto other, equally challenging and inspiring, topics such as UFO research, meditation techniques, new mathematics and physics and not least a powerful

**FROM SCIENCE TO SPIRITUALITY**  
 Man's Path to Higher Consciousness

spiritual awakening within the soul. This has led me forward on the path I refer to as "From Science to Spirituality", and will hopefully be the title of a forthcoming book I hope to write over the coming winter months.

### Pieces of the Jigsaw

I believe that we all hold pieces of the cosmic jigsaw. Whatever our individual views or opinions on crop circles and other unexplained events, I believe there is an underlying strand of order within the seemingly chaotic subjects we research.

### Synchronistic Research

Having spoken to many researchers over the past years I have often been surprised at the number of coincidences or synchronicities which have occurred,

both in our lives and everyday existence, but also in cross-over points in our respective research.

### Linking the Pieces

It is my belief that all of the various ideas within the unexplained subjects are all linked together and we just need to arrange the pieces in

a way which yields the overall picture. Some of the content in this article has been inspired by conversations, meditations and even dreams I have had during the course of my research and one thing which seems to occur more than anything else is the idea of waves or oscillations and harmonics.

### Harmonic Resonance

I believe that everything in the universe consists of many different harmonics which combine to form the unique identity of the item we are observing.

Each of these harmonies creates resonance in other objects and it is the way these waveforms interact which gives us the universe around us.

This can be illustrated if one was to

pluck a string on a violin. The resulting tone may create objects on your desk to shake or oscillate and rattle. This is caused by the harmonic resonance between the two objects and creates a specific bond between every object in the universe and every other object.

The theory I have been working on is so

simple, yet can explain everything. Ultimately it comes down to quantum physics and the nature of individual atoms and electrons within objects, but I shall try to avoid technical terminology in this brief introductory article.

I believe that this theory can explain life after death, crop circles, ancient

---- Graph 1    — Combined waveform of graph 1 and graph 2  
 -- Graph 2

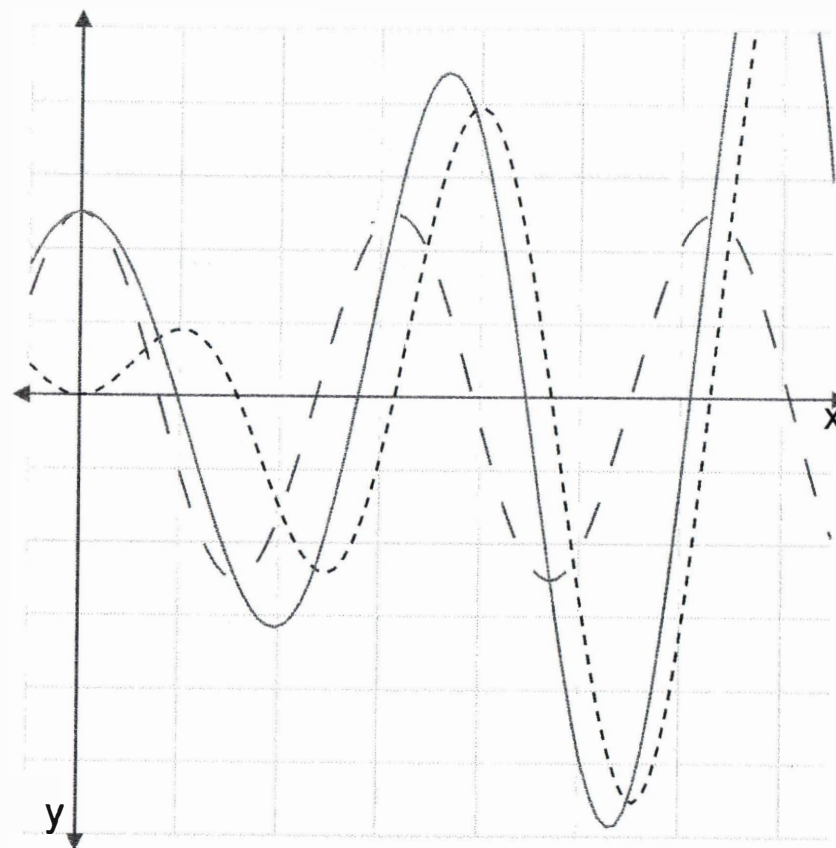

Fig. 1 The combination of two independent waveforms

knowledge, ley lines, ghosts, UFOs, ESP, spiritual healing and even, ultimately, sources of free and alternative energies.

### One Hundred Monkeys

It can also explain, scientifically, how the famous one hundred monkey syndrome works and graphically demonstrate it's effectiveness.

### Graphical Interactions

At a simple level, let us imagine two different waveforms (see fig.1). I have illustrated these as the dotted lines on the graph. It doesn't matter what the exact waveform is, but notice the peaks (high points) and troughs (low points). Now look at the continuous line. This is the sum of the two dotted lines added together.

Notice that where the two original lines peak, the resulting sum is a greater peak. Note also that where the continuous (ie. sum) crosses over the base line (indicated by the straight horizontal line labelled x), you will find that the two dotted lines equal each other, but one is a peak (positive) and the other a trough (negative).

### The Signature Harmonic

This is a simple example to show the interaction of just two waveforms. In real life, things would be composed of millions and millions of composite waveforms. However, the combination (or addition) of these many waveforms will still form a unique *signature* waveform of the relevant object (the continuous line in the example above).

This line is what I call the *signature harmonic* of an object and is, ultimately, the only thing that counts. If you like, it's the end result that counts, not how you get there. For example, if the end result is five, the components could be one plus four or two plus three or one plus two plus two, or even six minus one.

### How to Create our own Reality

If we can shape the end result - the signature harmonic - then this is what is meant by "creating our own reality". We may want the end result (reality) to be six for example, and we may know that our current state of being is two. If we could artificially create a waveform equivalent to four then we would be creating our own reality by generating the correct waveform to produce the correct total.

### Tuning the Frequencies

This is just another simple example, imagining that everything just has two waveforms, but the same principle applies irrespective of how many waveforms form an object. For example, if we know what signature harmonic we wish to create, all we need to do is to work out what the harmonic of all other waveforms currently is and add or subtract from the signature harmonic to give our required *tuning* signal. By creating a waveform that is exactly the same as our target waveform, but exactly out of phase, so that each peak on one waveform is a trough on the other and vice versa we will end up with a signature waveform of exactly zero because the two waveforms will cancel each other out (fig.2)

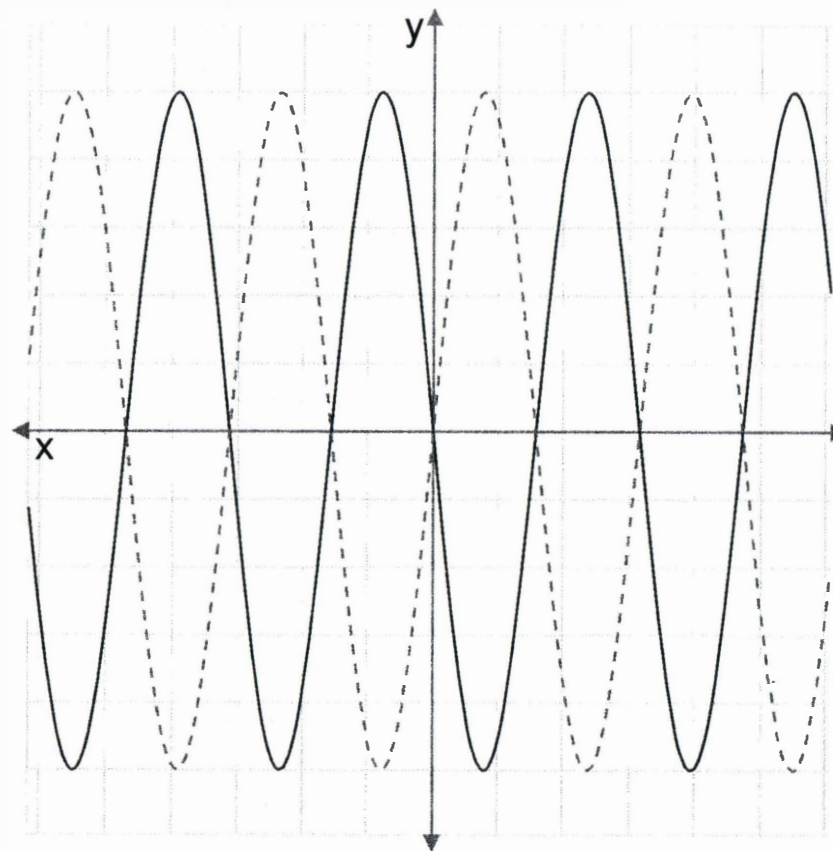

Fig.2 Two waveforms which would cancel each other out and thus give a zero signature

### Harmonic Healing

Imagine the impact of being able to detect the waveform of a cancer cell for instance, and being able to generate a new harmonic which would resonate with the original cancer in order to cancel it out completely.

### Forgotten Knowledge

It is my belief, shared by many others, that we can create these realities merely by using the untapped 90% of our

brains, by meditation and utilising the 'power of the mind'.

### Electromagnetic Research Findings

Over the past few years I have been detecting measurable electromagnetic anomalies in and around some crop formations. This has led me to believe that the force which makes the 'genuine' crop circles is causing a temporary disruption of the electromagnetic fields

around the area affected.

These signals, whatever creates them, seem to resonate with the signature harmonic of the standing crop so that a disruptive harmonic ripples down the stem of the crop creating an undue force between the cells in a horizontal fashion so that a higher pressure or lower pressure on one side will force the stem over in a preset fashion.

### Vortex Energies

This will often occur in a spiral or circular, vortex fashion which is why many of the crop circles have such an elaborate floor swirl.

Rather than the merely atmospheric vortexes proposed by Dr. Terence Meaden in the 1980's, I believe the vortex effect is multi-dimensional in nature (see Circular Dimensions in Enigma issues 1 & 2) and thus creates ripples and resonances in the space-time continuum around the crop circle site.

### Crop Circle Testing

Because everything in the universe has its own set of harmonics within, every person visiting a crop formation will leave minute ripples of their own harmonics resonating within the crop circle long after they have visited. This is one reason I try to visit crop circles as soon as possible, so that the minimum of additional harmonics have been introduced to the crop circle 'signature'.

Due to extensive testing over time, I have found that even when some crop circles exhibit significant electro-

magnetic anomalies, they return over time to their original readings. This period generally varies but seems to be in the order of around eight weeks. In other words, those crop circles that have exhibited high or low readings (relative to the standing crop outside the formation) give no anomalous readings after approximately eight weeks - quicker if visited by many people.

### Positive Results

This effect was particularly apparent in the 'treble Julia set' formation at Windmill Hill near Avebury, Wiltshire in 1996, where I obtained significantly different background EM readings inside the formation to those outside.

The Koch curve formation at Silbury Hill this year (1997) also exhibited anomalous EM readings. A full report will appear in the next issue.

I believe that there is no coincidence as to where the genuine crop circle designs appear. They all seem to be positioned near to Earth energy points - either ley lines or ancient and sacred sites. This, I believe, is no accident.

### The Keys to Consciousness

I also believe that the timing of the events is not down to chance either. I believe that there are five significant aspects within the cosmic jigsaw. I have called these the five keys to consciousness. They are;

1. Harmonics (sound)
2. Colour (light)
3. Location (sacred sites)

4. Time
5. Frequency

I believe that the culmination of these five things creates the energy which creates our reality. They all play a part in our multi-dimensional universe. I am currently conducting some experiments to test this theory and these ideas will play a major role in future Enigma articles.

A number of people, including UFO Investigator Roy Dutton, have calculated the ideal times and locations which may result in UFO sightings.

Ley Lines are said to channel energy across the Earth Grid, and visualising colour can result in powerful meditations.

### Remembering the Past

I also don't think that this is a new theory, or one that is just mine. I think I just happen to be remembering ancient knowledge that has been forgotten through the ages. Many people around the world are also re-discovering the same knowledge.

### Explaining 100 Monkeys

This knowledge seems to be spreading via what is known as the One Hundred Monkey principle, which is based on the premise that once one hundred members of a species have worked out how to do something, then the knowledge seems to magically pass automatically to the entire species.

This idea, of a global consciousness, was

popularised by Rupert Sheldrake in his excellent 1988 book entitled "The Presence of the Past", in which he explains it in terms of 'morphic resonance'.

### Explaining ESP and Telepathy

Effectively, every time you have a thought or idea you release a stream of brain wave forms which propagate through your aura and send out a 'thought form' into the universe around you. This thought form can interact with things around you and if you send out the correct thought form things can be affected. This idea can help to explain ESP and psycho-kinesis (the ability to move objects by the mind) and telepathy is merely the next step, whereby someone else can tune into and receive the thought form you transmit.

This sounds far-fetched but look around yourself now. Can you see anything? Sure, you can see the furniture in your room, or perhaps other people, or a view through a window. What about TV signals, or radio signals? You cannot see them but all around us are waveforms that are invisible to our five 'normal' senses.

### Hitting the Threshold

I think this is the way the one hundred monkey syndrome works. Imagine the waveforms of people all around the world, each like the dotted lines in figure 1. If you looked at the combined waveform of all these harmonics you would get a line similar to the continuous one. Note that the continuous one goes off the top of the graph when it

gets to the right. You will notice that the sum of all the composite waveforms is always bigger than the individual waveforms themselves; The whole is bigger than the individual parts. Now imagine some hypothetical line along the top of the graph, crossing which will flip the world into the fifth dimension or awakening the dormant spirituality within us.

There will be some point immediately before the summed waveform crosses this line (99 monkeys) at which the addition of a single waveform will make the sum total cross the line. This is my belief as to how the principle works. The actual number is hypothetical, but at some point the combined consciousness will hit some magical target value which will then initiate resonances in other things (people) who will also start to resonate at the new frequency.

### Moving Matter by Sound

A technique similar to this was demonstrated around 1800 by a German acoustical physicist called Ernst Chladni who demonstrated that rubbing a violin bow vertically up and down the edge of a round metal plate onto which he had sprinkled some sand, created strange circular patterns as the sand vibrated to the tones created by the bow.

Chladni's pioneering work, which demonstrated that sound could move matter, took nearly 100 years before it was re-discovered by Swiss scientist Hans Jenny who devoted his life to this new science he called "cymatics".

It is my belief that the huge stones forming ancient stone circles such as Stonehenge and Avebury could possibly have been moved their vast distances by using a form of cymatics. A similar event was witnessed by a Dr Jarl, an Oxford University student, in Tibet in 1939 when he photographed Tibetan monks levitating a five ton stone slab purely by the tones of 19 musical instruments. Further research into these ideas will form future articles.

### The Next World

There are millions upon millions of frequencies oscillating at levels way outside our limited physical senses. People such as Sir Oliver Lodge, William Crookes and Arthur Findlay were investigating these other frequencies - or dimensions - at the turn of the century, when they were trying to scientifically explain life after death.

Life after death can be easily explained in this manner and many experiments have proven that this is indeed the case; that when we die, the soul is separate from the body and merely resonates at a higher frequency. This is why some people, called Mediums, can communicate with the departed. They are merely tuning their own signature harmonic to resonate with the frequencies in the 'next world', much like a human short-wave radio.

### Suppressing the Evidence

Yet orthodox science, and especially the church, refused to acknowledge this research and people like Arthur Findlay had their books and work suppressed.

However, the tide is turning and more and more people are now realising the way the universe really works and the knowledge cannot be suppressed for much longer.

### Crop Circle Music

Last year I created a cassette tape containing music created entirely from crop circle pictures, using a computer programme I developed. I am currently investigating the possibility that playing particular tones inside a crop formation or at a sacred site may enhance meditational techniques.

This area of research seems to span many different angles and concepts, but at the end of the day is actually quite simple, everything being formed by the sum of waveforms. Imagine when you meet someone for the first time. Sometimes you 'click' with them on some level or feel 'love at first sight' or don't like them but can't explain why.

### Connecting with People

Now examine the situation from a harmonic perspective. All that is happening is that the waveforms emanating from you are interacting with other people. Some will be in phase and thus amplified (a feeling of love) or some may be out of phase which is why you may feel uncomfortable.

### Ancient Knowledge

I believe the ancient peoples of the world, knew this information and used it in order to build their impressive monuments and temples. The Egyptian pyramids allegedly have hidden

chambers underneath them. These I believe were used by the ancients to harness powerful energies via setting up harmonic resonances within them at certain times.

The Mayans seem to have been well aware of cycles and vibrations, with evidence being available in their pyramids and number systems, including a calendar system which is more accurate than the Gregorian system we use today.

### The Future

This is merely a preliminary article to introduce you to some of my current research projects. The ideas and theories examined in this article are now forming a major part of my investigations and I hope to be able to share ongoing findings with you in future issues of Enigma.

By careful studying of the sacred places around us, by using the correct tones and sounds and by preparing our mind to the countless possibilities available to it, we can truly create our own reality and change the world.

Paul Vigay

### ***Paul Vigay exposes the real agenda***

Once in a while I come across a topic which makes me wonder if I have bitten off more than I can chew. This is one such topic.

HAARP stands for High Frequency Active Auroral Research Program and is a US Department of Defence project into Ionospheric research, based at Gakona, Alaska.

#### **Secrecy and Denials**

It's real purpose seems disguised and suppressed under a huge veil of secrecy and denials, but it's implications are world-wide and could be literally Earth shattering.

Although not many people have heard of HAARP, it has been an ongoing project since the early 1990's when a military contractor called E-Systems started building the complex. It is not scheduled to be fully operational until 2002, although some people claim it may be operational as early as 1998.

#### **Tesla Technology**

I discovered the HAARP project about a

year or two ago whilst I was carrying out my own research into the works of Tesla, the unsung hero and discoverer of radio and AC power. It seems that the US government are aware of some of the discoveries of Tesla and are trying to recreate them on a huge scale for their own purposes - which I believe to be rather sinister and dangerous for the rest of us.

In fact, the more I researched HAARP, the more I became amazed that it has not hit the major headlines or that environmental activists such as Greenpeace and Friends of the Earth haven't expressed major public concern.

#### **Confusion Reigns**

As you will see within this article, the purpose of HAARP is far from clear. In fact it seems that the US military have deliberately muddled the water amongst volumes of paperwork and confusion to specifically confuse people as to what is really happening.

The history of HAARP reads like one of those confusing novels where different

people, events and places are introduced in every paragraph, so that by the end of the first chapter you are thoroughly confused and give up trying to read the book.

#### **The Official Line**

Officially, HAARP is described as a facility for upper atmosphere and solar-terrestrial research, including a high power phased radio array transmitter used to "stimulate small, well-defined volumes of ionosphere", together with a number of devices for measuring atmospheric changes.

#### **Hidden Uses**

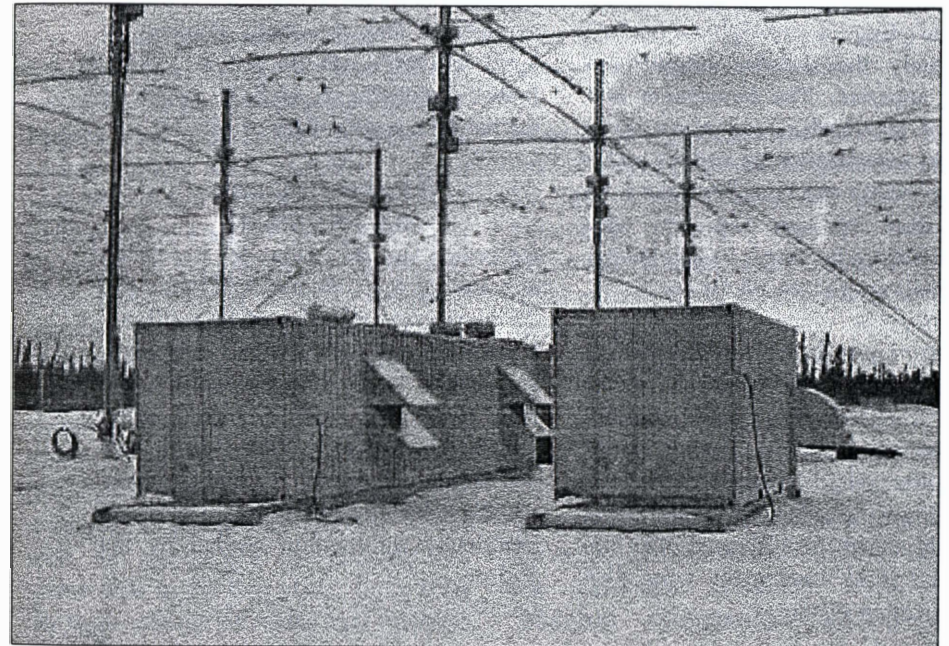

Although the official documents go into some detail as to what can be observed and measured, they become more vague as to what can actually be transmitted using the system. I'm not surprised,

given all the science fiction like rumours of what can be done.

#### **It's Real!**

What is not up for discussion and debate is the fact that the complex actually exists. The photos within this article prove that. The problem is finding out what is really going on, so perhaps we should start by trying to unravel how it all started.

It seems that the trail of mystery concerning the original contracts to build the HAARP complex in Alaska starts with some patents originally presented by Tesla, including ones for transmitting power without wires, obtaining nuclear sized explosions without radiation and methods to alter a region of the Earth's atmosphere, amongst others - Twelve in total.

### Eastlund Patents

Many of these patents were invented by an engineer called Bernard J. Eastlund and owned by a small company called APTI (more of which later). Eastlund was working as a consultant for a company called ARCO (Atlantic Richfield Oil Company), being originally hired to come up with a way of utilising vast reserves of natural gas held on the North Slope of Alaska.

The problem with all this vast reserve of gas was that the location was so remote there was no use for that kind of power usage on location and the cost of piping the gas to more convenient, populated areas would be prohibitive.

### "Ionospheric Heating"

Eastlund began thinking as to how this huge, billion watts of power could be put to use and came up with an idea to create the world's biggest "ionospheric heater". Immediately the defence implications became apparent. The ionosphere is a region of the Earth's atmosphere some 40 to 600 miles above the surface and is basically what protects us from the solar energy from the sun and also what bounces back radio waves so that we can send signals around the planet.

### Military Uses become Obvious

By manipulating the ionosphere the military realised they could control global communications. Enemy radios and satellites could be rendered useless, and by knowing what you were doing you could adjust the system so that you could use it to implement your own communication system.

### Star Wars

This Tesla inspired technology was what was to become the US Strategic Defence Initiative (SDI), or "Star Wars" system, popularised by the Reagan administration in the 1980's.

### Destructive Death Ray Weapons

Some of the military applications of this type of Tesla were voiced by Tesla himself in a New York Times article of December 8th 1915 in which he stated, *"It is perfectly practicable to transmit electrical energy without wires and produce destructive effects at a distance. I have already constructed a wireless transmitter which makes this possible and have described it in my technical publications, among which I refer to my patent number 1,119,732 recently granted."*

On Nov. 3rd 1993 the US Air Force announced that the main contract to build HAARP was to go to ARCO Power Technologies (APTI), which at the time was a subsidiary of ARCO.

### What do we have that they want?

According to the Dun & Bradstreet directory of corporations, APTI only had 25 employees and sales of \$5 million a year. How did such a small subsidiary get such a large contract; worth more than five times APTI's annual sales. HAARP investigator Nick Begich saw that the only way such a small company could get such a contract was if they had proprietary information needed by the project.

This trail circled back to the Eastlund patents mentioned earlier. Although the various companies denied doing research into the areas the patents spoke of, it seems unlikely that APTI got the contract because of anything but owning the relevant patents required by the project.

### Unlikely Takeovers

After the military contract was awarded however, APTI was sold to E-Systems under undisclosed terms. APTI had shown no net income since it opened in the late 1980's which added to the puzzle of the sale. E-Systems now assumed control of the patents. It seems that this was the only reason E-Systems wanted to buy APTI. After all, APTI had no net income and no major assets apart from the twelve patents and an unfunded second phase of a construction contract.

### Multi-purpose system

It is quite clear that the HAARP project intends to use the ionosphere for military purposes, but at the present moment it is unclear exactly what. However, it does seem that such a project can be a sort of multi-purpose system - handy when you are trying to get funding for something, when there can be so many potential benefits, such as transmitting power cheaply or repairing the ozone hole.

However, it seems that the problems and potential dangers far outweigh the publicised benefits of the project. For example, it seems that HAARP could well be responsible for creating the ozone hole in the first place, along with the huge amount of rocket fuel released

into the atmosphere by the US space program each time they launch a rocket or space shuttle.

### Government Distractions from the Real Truth

It appears, during the course of my research, that the perceived danger of aerosol cans releasing CFC's into the atmosphere and creating the ozone hole is an exaggerated myth spread by the government to cover up the fact that far more damage is being done by their own 'games'.

So much seems experimental about the whole project that *No HAARP* campaign founder Clare Zickuhr said, "The military is going to give the ionosphere a big kick and see what happens".

### Playing Games with the Earth

"They're like boys playing with a sharp stick, finding a sleeping bear and poking it in the butt to see what's going to happen", said Barbara Zickuhr.

However, the problems are not only for the US military, for the implications are for the whole Earth. If they do something which could cause irreversible damage to the ionosphere, it could render the atmosphere useless to protect us from the Solar radiation constantly emanating from the Sun.

### Government Lies

What we do know is that the Government has continued to lie about the project. They hid the interaction of the original twelve patents and also kept one particular document - PL-GP Technical Memorandum no.195 so

secret it has been kept from the public's eye to this day. It explains the military applications of the project were supposed to be sanitized before public release.

### Weather Modification

Another interesting aspect of the HAARP project, one which has been less hidden to the public eye is that of weather modification. Using the technology involved in HAARP beneficial effects can be created such as changing the molecular composition of portions of the atmosphere, for example, increasing levels of ozone, nitrogen etc.

The environment could also be enhanced by creating the breakup of chemicals such as carbon dioxide and carbon monoxide. Thus HAARP could be utilised to diminish the effects of the Greenhouse Effect.

However, I think the most worrying aspect of it is the amount of mist and secrecy surrounding the whole thing. It is obvious after minimum investigations that the government are hiding the real agenda, and by reading through the twelve patents (details in future issues) we can get a feel for some of the ideas that are possible.

### Stranger than Fiction

Some sound like science fiction stories, but often truth is stranger than fiction and I would rather be aware of possible mind control techniques beaming ELF frequencies around the world to modify behaviour patterns.

### Public Awareness

Even if some ideas sound fanciful or far-fetched, I think the concepts should be brought to the attention of the public, so that more questions can be asked and the government is forced to come clean about its plans for the system. After all, we only have a very short time before the system is operational and by then it could be too late.

Because HAARP can be used to pinpoint its effects either over a large or small area, it may be worth further investigation to see if we can detect signs of its power. For example, using HAARP it is more than possible to knock out not just communications but also electronic systems. It's a disconcerting thought, but could HAARP testing have been responsible for the explosion of flight TWA-800 which spontaneously exploded over Long Island on July 17th 1996?

Certainly HAARP is capable of doing such a thing, as this was one of the original aims of the Star Wars projects, to destroy enemy planes and missiles whilst still airborne.

I have only just scratched the surface of this major controversial and conspiracy ridden project. Expect to see more updates in future articles as I find out more to report on.

I would recommend that interested readers buy the book "Angels Don't Play this HAARP" by Jeane Manning and Dr. Nick Begich, from which much information for this article came from.

*List complete as of 28th July 1997*

The teachings of Jesus stand up on their own merits. No one will argue with his words of wisdom. "Do unto others as you would have them do unto you", is a worthy philosophy. The problem many people have with religion is not the 'genuine phenomena' of Christ, but the manipulation and persecution of anyone who dared to question the evidence, perpetuated by the church through the 2000 years since the wise ET made his comments.

Let us not turn crop circle research into the church of the middle ages, where anyone who dares to question the 'authority of the experts' is persecuted as uttering the words of the Devil.

There are no experts. Remember that!

The other major issue of research during the last few months has been the formulation and concepts of a harmonic resonance research project that I am going to undertake. This will attempt to piece together the various jigsaw pieces of the cosmic jigsaw and I hope will inspire research and ideas in others and together we can progress to the next level of consciousness.

After all, many people have been wanting more from the crop circles, more from UFO's and asking the question, "What next. We want more".

To this end, I believe the crop circles have served their purpose - to make people communicate not only with others but also with their higher selves. Sure, crop circles will no doubt

continue, and every year new people will get introduced to the wonder and excitement of the subject.

However, those who have been investigating the subject for a few years now, I believe have probably received the 'calling' and have 'interpreted' the message and now want something more. Their appetite has been whetted.

I don't believe that these people actually *need* the crop circles anymore as they know intuitively, through personal experience, what a genuine circle is and what a hoaxed circle is. Perhaps we have come full circle - if you excuse the pun!

At the end of the day we are just looking at flattened crop. However, the message is eternal and crucial to our awakening consciousness. We don't need to investigate the crop anymore. We need to investigate ourselves.

I'm sure many people will understand what I am getting at. These editorials are a spot where I can ramble about thoughts which are inspiring me to continue investigating the unexplained and the unanswered.

Please feel free to contact me if you agree with what I write. Please also feel free to write if you disagree. I'm not an expert, I'm just sharing views, and as David Icke would say, "take on board what means something to you and discard what doesn't"

And may you have a happy voyage.

**" Special Offer to Clubs and Shops "**  
*Enigma is now available with a quantity discount for shops wishing to stock it, clubs who wish to pass savings onto their members, or raise funds for their local group.*

*If you buy ten or more copies of a single issue, the price is just £1.00 per issue. This represents a saving of 50p per issue and can raise £5.00 profit for your club, or alternatively, provide your members with a good bargain.*

*To take advantage of this offer simply order ten (or more) copies from the address below, enclosing a cheque for the relevant amount.*

## **I.R.C.U.P. UFO DATABASE**

The Independent Research Centre for Unexplained Phenomena now offer a complete catalogue of UFO, Crop Circle, Mars Face, Ancient Technology, Government Cover-ups and associated subjects database. This currently consists of over 1000 documents.

A complete, up-to-date index of all documents is now available for only £3.00.

Individual documents can then be ordered for varying prices (depending upon the length, at 20p per A4 page + postage)

### **Subscription Details**

Enigma is published four times a year (not necessarily quarterly) and is available on subscription for £8.00(UK) per year (4 issues) within the UK or for £15.00(UK) to the rest of the world.

Please make cheques/POs made payable to "Enigma Publications" and send to the address below, stating which issue you would like to start with.

To advertise or submit articles, please address all correspondence to the address above.

If you would like information returned to you, please enclose a stamped addressed envelope.

The views and opinions expressed by contributors in Enigma are not necessarily those of the editor, I.R.C.U.P., other contributors or advertisers. All articles and information published in Enigma remain the copyright of the original author(s).

No part of Enigma may be reproduced, copied, re-edited or transmitted without the express written permission of the editor or author(s) concerned.
